

AN EXTRA 25 MINUTES

could make all
the difference
for a child

HALF OF ALL PEDIATRIC IV PLACEMENTS RESULT IN COMPLICATIONS^{1,2}

Indicated for patients age 2 weeks and up, the
Orchid Safety Release Valve eliminates wasteful,
time-intensive IV dislodgements

- Minimize traumatic events in the most at-risk population
- Avoid unscheduled IV starts
- Decrease exposure to sharps injuries
- Achieve greater patient safety and satisfaction
- Minimize medication lost and waste
